

FaxPulse

Automated Inbound

Automated system availability testing for RightFax

With its unique automated testing features, FaxPulse AI protects your RightFax system from costly inbound failures and busy signals with 24/7 monitoring and real-time transmission failure notifications right to your inbox.

How FaxPulse AI works:

FaxPulse AI helps you:

- Verify availability to external partners and vendors
- Avoid busy signals and fines for not meeting SLAs
- Receive immediate email notifications when transmission errors occur
- Keep admin and maintenance teams in the loop when pulses fail

Peace of mind for inbound availability.

Even with extensive manual testing and SOPs, the truth is, sometimes you won't know your RightFax system is unavailable to receive faxes or is showing busy signals – until it's too late.

FaxPulse AI was created to help administrators remove manual testing in exchange for 24/7 automated inbound monitoring. It works by sending scheduled Pulses to your server(s) and tracking successful transmissions. If any issues are detected, administrators receive immediate email notifications.

If your organization relies heavily on inbound fax, FaxPulse AI is the perfect add-on for your toolkit.

FaxPulse

FaxPulse does monitoring, error detection, and business intelligence for you, making it easy to monitor and manage your RightFax system with less workload and resources. Speak with a representative to learn more of how FaxPulse helps organizations reduce cost of ownership and improve system performance for any sized system.
